

A B S T R A C T

A SYSTEM FOR ASSISTING THE REGENERATION OF AN EXHAUST
LINE PARTICLE FILTER

5

A system for assisting regeneration of a particle filter of an exhaust line (3) of a diesel engine associated with, in particular:

- 10 - a particle filter (7);
- an oxidation catalytic converter (6);
- a common system (8) for feeding fuel to the cylinders of the engine;
- means (16) for adding to the fuel an additive adapted to reduce the combustion temperature of the 15 trapped particles and propagate their combustion; and
- monitoring means (17) for triggering a phase of regeneration of the particle filter by combustion of the particles trapped therein during a phase of multiple injections of fuel;

20 characterized in that the particle filter (7) is impregnated with a catalyst for oxidizing the hydrocarbons and CO present in the exhaust gases flowing through said particle filter.
